

## CampusCE Corporation: The Collaborative Environment

The CampusCE Education Management System (EMS) serves as the hub for a unique, business information and distance learning ecosystem which includes solutions for:

- ▶ CampusCE EMS Campus Management & Online Registration
- ▶ High-Stakes Assessment Management
- ▶ Multi-source Data-Warehousing
- ▶ Course and Instructor Evaluation
- ▶ Curriculum Workflow Automation

**High-Stakes Assessment.** These services allow simple administration of multiple types of assessment and the most powerful reporting tool available today. At the push of a button CSV or Excel reports are produced showing metrics including duty and task reporting, distracter selection, and distracter selection based on learning source or demographic information.

**CampusCE Rapid Data-Warehousing.** CampusCE's rapidly deployable data-warehousing functionality gives EMS administrators the flexibility to create and reuse ad hoc reports on any combination of data in real-time using comprehensive report-authoring tools that include integration with standard Microsoft Office products. The CampusCE rapid data-warehousing solution allows you to select and combine multiple data sources into "cubes" including the CampusCE EMS, any CRM, back-end enterprise system and/or stand-alone databases.

**Course and Instructor Evaluations.** CampusCE offers integrated instructor and course evaluations. These evaluations can be anonymous, questions can be randomized, and can be linked to demographic data (demographic links are not required). Reports are run directly from the CampusCE database and can be output on-screen, in print, or as CSV export files.

**Online Display Advertisement Management Tool.** Supported by our partner community this tool allows organizations spending \$5,000 or more per month to manage and optimize their advertising reach, budget, and results effectively and easily with our without support from CampusCE depending on their needs and resources.

**Curriculum Workflow Automation.** CampusCE's integrated curriculum management solution provided by Governet, has been developed through direct collaboration with the California Community Colleges Chancellor's Office (CCCCO). In 1998 Governet served the CCCCCO by developing, operating, and managing a statewide, web-based repository of shared documents called the CCC Clearinghouse. The effort resulted in the flagship CurricUNET product in 2000, which streamlined and automated curriculum approval at the state, district and local level.

Governet has over 13 years of experience in working with institutions of higher education, and has implemented CurricUNET in projects as small as a single institution with 1,874 enrollments, to three statewide systems, including California, with 112 community colleges, 2,914,735+ enrollments, as well as Miami Dade College with 174,000 enrollments. The Governet client list includes 350+ Institutions/Campuses including the design and implementation of the countrywide curriculum system for the United Arab Emirates.
